

Dear Sir(s),

By means of this letter we would like to draw your special attention to our trade.

Originally we were a diving business, but we have developed a specialization in another field, namely, that of welding by means of the "Thermic Lance".

.In some 70% of the cases, we apply this burning technique for the removal of hinge-axles of cranes, shutters on ships, winches, discs and hydraulic cylinders which have to be taken apart for inspection and/or repair. Due to corrosion or damage, such axles are often very difficult to dismantle, even with highly sophisticated hydraulic equipment.

On account of our long-standing experience, we are able to burn through these axles completely (hollow them out) in a surprisingly short period of time, without causing any damage to the other parts of the construction. This means that much time will be gained. This holds also true for very large axle-diameters, stainless steel axles, cast iron and various other alloys, which the usual burning techniques cannot be applied to.

Our service cars, especially equipped for this work, are at your service 24 hours a day, 7 days a week, and provide special equipment such as
Mobile Diamondwihresaw,
Mobile Abrassiv Waterjetcutter,
Mobile Gigantig oxyacetylene burners
various types of lances, pull-bushes, spindles, various hydraulic jacks, ,
grinders, tackles, and various general tools.

We are most willing to provide you with more detailed information and we hope to be of service to you in the future.

Yours sincerely,

Hans Walzer
